HR Analytics Dashboard

This report presents an interactive HR dashboard designed to analyze employee status, salary, attendance, performance, employment type and work experience.

1. Project Overview

The HR Analytics Dashboard is an interactive dashboard developed using Microsoft Power BI. It presents important workforce information through KPI cards, charts and filters. The dashboard helps users analyze employee status, departmental patterns, salary, attendance, performance, employment type and the relationship between salary and work experience.

2. Project Objectives

- Analyze the total workforce and employee status.
- Monitor active and inactive employees.
- Analyze attrition by department.
- Compare average salary across departments.
- Compare average attendance across departments.
- Analyze employee performance distribution.
- Understand workforce composition by employment type.
- Explore salary patterns in relation to work experience.

3. Tools and Technologies Used

Microsoft Power BI: Used to build the interactive dashboard and visualizations.

DAX: Used to create the custom Average Attendance % measure.

Data Analysis: Used to analyze employee-related metrics.

Data Visualization: Used for KPI cards, bar charts, donut charts and scatter plots.

4. Dashboard Components

The dashboard contains:

- KPI Cards: Total Employees, Active Employees, Inactive Employees, Average Salary and Average Attendance.
- Attrition by Department donut chart.
- Average Salary by Department horizontal bar chart.
- Average Attendance by Department horizontal bar chart.
- Employee Performance Distribution column chart.
- Workforce by Employment Type donut chart.
- Salary vs Work Experience scatter plot.
- Interactive filters for Department, Location, Employment Type, Gender and Active status.

5. Dashboard Preview

The following image shows the final HR Analytics Dashboard created in Microsoft Power BI.

6. Key Dashboard Results

Metric	Result
Total Employees	500
Active Employees	467
Inactive Employees	33
Average Salary	■ 665.2K
Average Attendance	91.14%

7. Major Insights

Employee Status: Out of 500 employees, 467 are active and 33 are inactive.

Salary: Engineering has the highest average salary at approximately ■ 1,086.53K.

Attendance: The overall average attendance is 91.14%. Finance has the highest displayed departmental

attendance at approximately 91.61%.

Performance: Performance Score 3 has the largest employee group with 194 employees, followed by Score 4 with 144 employees.

Workforce Composition: Full-time employees form the largest group with 401 employees (80.2%). Contract employees account for 72 (14.4%) and part-time employees account for 27 (5.4%).

Work Experience: The scatter plot visualizes the distribution of average salary against work experience, helping identify salary variation across different experience levels.

8. Custom DAX Measure

Average Attendance %

```
Average Attendance % =  
DIVIDE(  
    AVERAGE(HR_Data[AttendancePercentage]),  
    100  
)
```

9. Conclusion

The HR Analytics Dashboard provides a clear and interactive view of workforce information. It combines KPI metrics with departmental comparisons and employee distribution analysis to support better understanding of HR data. The project demonstrates practical skills in Microsoft Power BI, DAX, data analysis and dashboard design.
